DATA ANALYTICS

FORENSIC ACCOUNTING & FRAUD INVESTIGATION

Rudra Vignesh Venugopalan is a versatile problem solver specializing in data analytics and AI tool development that he leverages into solutions for forensic accounting.

Rudra assists our senior testifying experts by investigating and distilling large sets of financial data. He applies a combination of data analytics skills, software development skills along with his finance and technology background to find key insights and evidence that form the basis of expert opinions.

His experience includes both financial analysis and software development. He has worked with various databases, uncovering red flags and irregularities. Rudra has also automated processes using AI tools that help with search and summarization across large litigation datasets, accelerating the extraction of financial insights from unstructured documents. His work also includes business valuation modeling and reviews, where he applies asset-based, income-based, and market-based approaches to financial modeling.

Prior to his current role, Rudra was an analyst at a business valuation and forensic accounting firm and held a data science internship at an insurance technology company.
